Generate Application-Specific Password

2-Step Verification must be enabled on your account before setting up an application specific password. Please visit www.wmich.edu/google/help-support for instructions to set up 2-Step Verification.

An application-specific password is required to sync your Google account with certain devices, such as OS X or iOS devices. Please follow the steps below before attempting to set up your Google account with iOS or OS X.

1. Log in to your Google account. Click the profile button in the top-right corner and click Account.

2. Click the Security tab. Click Settings next to App passwords.
3. Click **Select App** and choose **Other (Custom name)**.

4. Enter any desired name for this password and select **Generate**.
5. Your application-specific password will then be displayed.

Please take note of the password, as you will not be able to view it again once you leave this page. The spaces are a part of the password.

You will use this password to set up sync with your devices.
