Marine geochemist David Hastings’ research focuses on paleoclimatology, the history of past climate change. His multidisciplinary approach combines marine biogeochemical processes, anthropogenic contamination, and the reconstruction of ocean temperature to understand past and future climate change throughout Earth's history.

Dr. Hastings was one of five of Florida’s top climate scientists that met with Governor Rick Scott to urge him to develop policies to offset the impact of human-induced climate change to the State.

**PUBLIC LECTURE**

**11:30am FRIDAY MARCH 27th**

**2452 Knauss Hall**

RSVP for Lunch directly following the lecture to Deb Stoyanoff • 269-387-2716 • debra.stoyanoff@wmich.edu
