EMR 6550: Quasi and Experimental Design

When: Fall 2018
Wednesdays, 5:30 – 8:00 pm

Description: Experimental and quasi-experimental designs are often used in applied research and evaluation to establish casual relationships. This course will focus on the principles for designing experimental and quasi-experimental studies. Designs will include individual-level and multi-level studies, for example, patients nested in clinics where treatment is assigned at the clinic level or students nested in schools where treatment is at the school level.

Prerequisites: EMR 6450 or permission of instructor

Instructor: Jessaca Spybrook. Please email me at jessaca.spybrook@wmich.edu with questions.
