Kevan Hess is a Kalamazoo native, born on March 30, 1988. While studying at Western he has pursued his Bachelor’s in Physics with a minor in mathematics. Hess was a three-year letter winner during his time with the WMU baseball team and was drafted in the 14th round by the Detroit Tigers in 2009. Hess was featured in the Kalamazoo Gazette in September of 2010.

“Ever since I was a kid, there have been two things that have always intrigued me: sports and science. Learning how things work has driven me through school and through my sporting career. Once I took my first physics class in high school, I knew that was what I wanted to study. Physics explains how our Universe works and it is a field with a large frontier ahead of it.

After three years studying at Western, I was fortunate enough to continue my baseball career professionally with the Detroit Tigers. Since being drafted, I have continued to come back and take classes in the offseason to pursue my degree in physics."

- Kevan Hess

Department Launches Blog

The department has opened a blog at:
http://wmuphysics.wordpress.com as a forum for students, alumni, staff and faculty of the Department of Physics and beyond to comment on and discuss academics, life at and around the department, and the physical world. Other objectives of this blog include: 1) serving as a communication mechanism among all those associated with our department; and 2) providing our students with additional information and guidance that may help them succeed in their programs and plan for their future careers.

All members of our community are welcome to read the blog regularly, comment on posts, and contribute with their own posts. To submit new posts just email them to any of the blog caretakers:
Manuel Bautista, undergraduate advisor 
manuel.bautista@wmich.edu
Michael Famiano, supervisor of the Physics Club 
michael.famiano@wmich.edu
Kirk Korista, department chair 
kirk.korista@wmich.edu

Professor and Graduate Student Advocate for Physics Research

On March 5, 2012, Dr. Michael Famiano and graduate student Ramón Barthelemy accompanied more than 30 physicists on a science advocacy trip to Washington D.C. The trip was an effort to stop the current budget cuts targeting Michigan State University’s Facility for Rare Isotope Beams (FRIB), as well as to maintain support for fundamental nuclear physics research. The fledging construction of FRIB recently suffered a $28 million cut which will delay the project.

The team of physicists met with congressional representatives, senators and staffers to raise awareness about FRIB and urge them to provide the full funding initially pledged by the federal government. During the trip Famiano and Barthelemy met with several house and senate appropriations committee members, several senatorial and congressional staff members, and Congressman Fred Upton. The trip was considered a success and many senators and congress members pledged their support and offered their signatures on support letters prior to legislative approval of the recently released President’s budget.
Meet the new chair of the Department, Kirk Korista

The new department chair is Kirk Korista. Korista joined the Department of Physics in August 1997 as its first Ph.D. astronomer. Korista’s research interests lie in modeling the spectra of photoionized plasmas, especially that located near super-massive black holes found at the centers of massive galaxies, a class of objects known as Active Galactic Nuclei. After nine years of service as the chair of the Department of Physics, Pancella rejoined the faculty in July 2011.

Changing of the Guard

Nora Berrah is on sabbatical leave during the 2011-12 academic year in Paris, France. She is working with several collaborators at the French synchrotron radiation facility SOLEIL, which is located near Paris (Plateau de Saclay), France. Berrah received a “Triangle de la Physique” chair that encompasses University Paris VI, University d’Orsay and WMU to carry out research with impacts on either astrophysics or the structure of bio-molecules; specifically, she is carrying out photodetachment experiments on H- with Drs. Catalin Miron (SOLEIL), Jean-Marc Bizau/Denis Cubaynes (ISMO) and Francis Penent (Paris VI, LCPMR).

The H- negative ions are responsible for a large part of the opacity of stellar atmospheres, including our own sun, and are relevant for the physics of interstellar clouds. These measurements must be carried out at low-photon energies not available at the Advanced Light Source where Berrah usually conducts her research. Berrah shipped her anions source to SOLEIL to carry out the measurements.

She also collaborated with Drs. Pascal Lablanquie, Francis Penent (Paris VI, LCPMR), and Dr. Alan Wuosmaa (WMU) on a different research topic that she pursues at the Stanford Free Electron Laser (FEL), creating double K-shell vacancies in various molecules.

The goal of this latter work is to determine a new methodology, either with FEL or synchrotrons, to establish the structure of complex molecules, such as bio-molecules, in ways not possible with present single K-shell experiments. The research work is funded by a U.S. Department of Energy Basic Energy Sciences grant via WMU, and support from the “Triangle de la Physique” funded by the French Ministry of Higher Education and Research.

Sung Chung received an honorable fellowship Invitation Fellowship Programs for Research in Japan from the Japan Society for the Promotion of Science, a Japanese government agency, to conduct research with Professor Norio Kawakami in the physics department of Kyoto University, Kyoto, Japan, from May 1 to June 29, 2012.

Alumni News

Ileana Dumitriu has accepted a tenure-track assistant professor position at Hobart and William Smith Colleges. Since 2010, Ileana has been a visiting assistant professor in the Physics Department at Gustavus Adolphus College, where she taught upper-level classes (mechanics and E&M); introductory classes (general physics I and II); physics laboratories; and two J-Term courses (Romania, and physical world). Hobart and William Smith Colleges is a private, liberal arts institution founded in Geneva, N.Y. in 1822, and is situated in the heart of New York State’s Finger Lakes Region. In the 2012 edition of Best Colleges, it is ranked number 64 as a national liberal arts college. Ileana starts her new position at HWS on July 1, 2012. In the fall semester, she will teach general physics I and electronics, both introductory physics classes. She will continue her research in atomic physics and also start building an on-campus research laboratory.

John Tanis is on sabbatical leave during the 2011-12 academic year in Caen, France. He is working with colleague Amine Cassimi from the French lab on the transmission of slow- and medium-speed highly charged ions through capillaries of insulating tapered-glass of micrometer dimensions. This work is of interest from the fundamental point of view of understanding the interactions involved when the charged ions pass near the capillary walls. Such capillaries also are of interest because of their ability to produce very small beams that have several proposed applications in the fields of science, biology, and medicine. Several papers from this work are in progress. The work by Dr. Tanis is supported by a grant from the Basse-Normandie region.

Arthur McGurn has received an honorary position of visiting scholar in the Department of Physics and Astronomy at the University of California, Riverside, effective January 20, 2012, through May 31, 2012. Charles Henderson was appointed as senior editor of the journal Physical Review Special Topics — Physics Education Research. This is the top international journal in the field of physics-education research, with an Impact Factor of 2.302. It is part of a series of 11 Physical Review journals run by the American Physical Society, which are among the most prestigious international journals for the publication of physics research.

Lihua Wang has been working as a senior research associate at the Center for Superfunctional Materials, Department of Chemistry, Pohang, Korea, with Director Kwang-soo Kim, since October 2011.
Physics students assist professor in sabbatical

Asma Ayyad and Samanthi Wickramarachchi went to Caen, France in May to participate in an experiment and help with analysis of the data during Dr. Tanis’ sabbatical. The experiment involves the transmission of slow highly charged ions through insulating tapered-glass capillaries of micrometer dimensions. This work involves both the fundamental interactions of the ions with the capillary wall and also the applied aspects of producing micrometer-sized beams from the capillaries. The work by the students in Caen is supported by a grant from the Basse-Normandie region.

• Eli Garrett has been selected into the East Asia and Pacific Summer Institutes’ Program for Japan, sponsored by the National Science Foundation’s Office of International Science and Engineering.

Manjula Nandasiri awarded the Patricia L. Thompson Dissertation Award for spring 2012

The award is made possible through a gift from Dr. Donald Thompson, former vice president for research and dean of the WMU Graduate College. The awards are given to assist doctoral students with expenses associated with the dissertation process.

Graduate student awarded the Chambliss Astronomy Award honorable mention

Ehab ElHoussieny, graduate student under the supervision of Dr. Manuel Bautista, received his award at the 219th meeting of the American Astronomical Society in Austin, Texas in January. The awards are given to recognize exemplary research by undergraduate and graduate students who present at a poster session at the meeting. Awardees are honored with a Chambliss medal or, in the case of honorable mention, a certificate. This was ElHoussieny’s first presentation at a national scientific event. His work was one of only 25 posters selected from more than 300 competing posters and from among nearly 2,000 attendees.

Ehab ElHoussieny’s work on “Time Dependent Photoionization of Gas Outflows in AGN” is a theoretical model explaining the structure and dynamics of a class of broad absorption line absorbers (BAL) in quasars. BALs are presumed to be the main feedback mechanism that determines the co-evolution of the supermassive black hole that powers the quasar and the host galaxy. The model that ElHoussieny is developing, following previous work of Bautista, incorporates the effects of time-dependent variations of the radiation continuum that heats and ionizes the absorbers. Such variations in the ionizing radiation, characteristic of quasars, are expected to produce supersonic thermal waves and non-equilibrium condition through the absorbers, which might induce much of the observed structure and dynamics.

## David Carley Memorial Award
- Eiman Bokari

## Haym Kruglak Graduate Student Teaching Excellence Award
- Laurentiu Dumitriu
- Daniel McNeel
- Gaetan VanGyseghem

## Nathan Nichols Physics Scholarship
- Steven Dye
- Steven Nielsen

## Leo R. Parpart Physics Scholarship
- Samanthi Wickramarachchi

## Presidential Scholar
- Garret Marsh

## Paul Rood Physics Scholarship
- Garret Marsh

## Charles J. Wilcox Memorial Award
- Fall 2011 - Trevor Slayton
- Spring 2012 - Garret Marsh

## George and Jean Bradley Fellowship Award
- Mohamed ElHoussieny

Tamer Elkafrawy has been inducted into Sigma Pi Sigma (the national physics honor society) and the Society of Physics Students.

## Fall 2011 Degrees

### Bachelor of Science
- Trevor M. Slayton

### Master of Arts
- Betty A. Adams

### Ph.D.
- Mohammad Al Amar

Yes, I want to support the WMU Department of Physics!

I wish to contribute to the further success of Western Michigan University’s Department of Physics.

Your gift is important to our campus community. Your gift will benefit new opportunities to enhance the department’s teaching or research efforts or will assist students in achieving their educational and professional goals.

Your contribution will be processed through our WMU Foundation, and forwarded to the designated department.

Please accept my gift in the amount of:__________

___Check payable to WMU Foundation
(please designate Department of Physics on memo line)
___Credit card (check one)
    ___Mastercard ___Visa
Account #: ________________________________
Expiration date: __________________________
Three-digit code: _________________________
Signature (required): ______________________
___Electronic Funds Transfer (instructions will follow)

Give electronically here.

Please mail this completed form, along with your gift to:
Western Michigan University
WMU Foundation Office
1903 W. Michigan Avenue
Kalamazoo, MI 49008-5403
