

# Econ 3190

## Environmental Economics

This course is designed to teach you about:

- Placing dollar values on environmental amenities
  - The challenges facing social scientists working with the environment
  - Economics perspectives on sustainability and the environment
  - How markets can fail to protect environmental quality and the governments role in mitigating harm
  - Applying cost-benefit analysis for environmental decision making
- This course is taught in-person and is offered year round
  - This course is taught online during Spring semester
  - This course is offered as a hybrid during summer semester
  - This course complements degree programs in business, engineering, geography and environmental and sustainability studies
