1. Basic Considerations

In developing a budget, basic considerations or information will guide the form and nature of your work. Therefore, the issues should be known before attempting to construct either a preliminary or final budget.

☐ Type of agreement for the evaluation

Will this evaluation be funded by a grant, contract, or cooperative agreement?

☐ Condition of payment

Will payment be on the basis of cost reimbursement or a fixed price?

☐ Funding source

Is the funding source a government agency, private foundation, private sector business/industry, or nonprofit entity?

☐ Funding period

Over what period of time will the budget be applicable? Does this include more than one fiscal year?

☐ Budget contact

Who are the designated contacts for budget matters in the funding organization and in the proposer’s organization?

☐ Budget limits

Has a limit for the evaluation budget been established, such as percentage of total budget or maximum amount?
Condition of payment  Will monies from the funding agency be made available as a lump sum, periodically (e.g., monthly, quarterly, or on the basis of submission of deliverables), or reimbursable based on submission of invoices with required documentation?

Preaward costs  Are costs allowable that are directly related to the evaluation activities but are incurred before the official effective date of the grant/contract?

2. Format

Most agencies that actively fund projects that include evaluation components have specific formats in which they expect to receive proposed budgets. Likewise, institutions or agencies that conduct evaluations have one or more acceptable formats for presenting budgets.

- Designated format  Has a particular form or format been provided for the budget?
- Institutional format  Is the form or format acceptable to your institution or agency, or will it require a budget organized according to other specifications?
- Detail  Does the format require/include a separate set of details that explains how amounts are calculated or how the monies on a line will be used?
- Cost breakdown by task/function  Are there unique budgetary breakdowns, i.e., task, function, etc., required in addition to a budget summary by year and/or project activity?
- Summary  Will the budget require annual cost summaries and a performance summary?

3. Personnel Costs

The cost for personnel is usually the largest single item in a budget; therefore, it is critical that careful attention be given to the type and amount of effort that will be required to complete the evaluation as proposed. Further, a proposal that identifies key personnel is often more competitive than one in which personnel are more generally named, e.g., data analyst, research assistant.

- Personnel types  Have key types of individuals to both administer and conduct the evaluation been identified?
- Basis  Will personnel costs be determined on the basis of days of effort, percentage of time, percentage of assigned work load, person hours, or some other factor?
- Effort  How much time of each person/type will be required to complete identified tasks?
- **Unit costs**: What is the cost of a time/cost unit for each person?
- **Consistency of costs**: What anticipated increases (merit, cost of living, across the board, etc.) can be anticipated for each evaluation year?
- **Hiring costs**: Will recruitment and hiring costs be required to staff the evaluation?
- **Support staff**: Will support staff services be assigned to the evaluation, or will services (e.g., secretarial support, data entry services, etc.) be “purchased” from a pool?
- **Student assistance**: Have all costs for student workers, as defined by institution/agency, been considered?
- **Fringe benefits**: What fringe benefits, including vacation/annual leave time, sick leave, etc., are applicable for each staff member? What anticipated increases in fringe benefits are expected? What is included in the fringe benefit package? (Note: If employee benefits, such as vacation time, holidays, etc., are not a part of the “official” fringe benefit package, they should be included in the salary/wage line item for each staff member, as applicable.)

### 4. Travel

Costs for travel may include anticipated expenditures for administrative activities, attendance at required meetings with the funding agency, data collection, feedback workshops, participant involvement, etc. It is important that these widely varying costs be anticipated, identified by function, and carefully calculated using the best information available.

- **Purpose**: What type of travel expenses will be incurred, i.e., administrative, data collection, participant, etc.?
- **Mode**: What mode of travel will be utilized, i.e., air, auto (personal or rental), train, etc.?
- **Allowable**: What allowable travel costs are accepted by the funding agency and your institution, i.e., per diem, lodging?
- **Time requirement**: How much total time (travel and on-site) will be required to conduct the evaluation activities?
- **Consultants**: Will consultants’ travel expenses be paid from the travel budget line or the consultant line?
- **Sharing costs**: Is it possible to couple trips within this evaluation or with other evaluations to reduce travel costs?
Ground transportation  How will ground transportation be provided upon the termination of air travel, e.g., taxi, rental car, limousine services, etc.?

Courtesy/local support  Will on-site transportation be provided by another party and not charged to the evaluation?

Additional costs  What additional costs may be required for special situations, i.e., excess baggage, long/tiring flights that may require upgraded accommodations, etc.?

5. Supplies and Materials

Office supplies and other materials are required to conduct an evaluation, and they may be anticipated based on experience with other evaluations of a general nature; but some evaluations may have unusual requirements, and these should be specified as appropriate.

Office supplies  What supplies and materials will be needed to simply conduct the normal operations of an evaluation, e.g., office supplies and institutional products?

Specialized materials  What unusual supplies and materials will be needed for this evaluation, i.e., reference books, specialized printing cartridges, evaluation letterhead, data collection articles, etc.? (Note: computer software sometimes is restricted or requires special permission or must be listed separately as a computer cost.)

6. Communications

Normally, the costs for monthly rental of telephone sets and lines are included as a part of “indirect” costs, but long-distance calls, dedicated phone lines for specific data collection procedures, postage for mailing of surveys, etc., are allowable evaluation costs and should be estimated in this category.

Phone installation  Will any new installation of telephones, computer ports, or other communication equipment be required?

Phone usage  What are the fixed costs for the use of telephones, computers, and other communications equipment that can be identified as chargeable to the evaluation?

Evaluation-specific costs  Other than the usual administrative communications, will there be other costs for large mailings, express services, etc.?

Long-distance costs  What long distance telephone and facsimile charges and other variable communications costs will be incurred?

Postage/mail services  What postage or other forms of mail services will be required, giving special attention to mass mailings of surveys, notices, invitations, etc.?
7. Copying and Printing

Copying and printing costs often exceed estimates due to the ease with which modern equipment provides ready and rapid responses to staff actions. Further, some evaluations may require printing of optical scanning forms and other documents that must be obtained from external agents.

- **In-house copying**: How many persons will be making in-house copies, and will there be a system to monitor individual usage?
- **Per-page costs**: What is the current and anticipated rate of copying over the long-term evaluation?
- **Reports**: How many copies and of what type/quality must reports be submitted?
- **Promotional materials**: Will the evaluation produce promotional materials, i.e., brochures, pamphlets, etc.?
- **Data collection**: What printing costs will incurred as a part of the data collection process?
- **Outsourcing**: Can all printing jobs be handled inside the organization, or will some outsourcing be required?

8. Equipment

In most cases, purchase of equipment is not an allowable expense for evaluation budgets. However, there may be specialized functions for which a justification and inclusion of equipment costs are acceptable.

- **Type**: What specialized equipment is needed?
- **Purchase vs. lease/rental**: Is purchase of the equipment a better value than lease/rental?
- **Allowable**: Does the RFP or similar document address equipment purchases or rentals?

9. Other—Consultants

The use of consultants to gain specialized expertise or to accomplish specific tasks/activities is a common practice. Consultants are considered to be independent contractors and are not included under personnel costs, and seldom are they provided with fringe benefits or other support services normally available to evaluation employees. Separate contracts are established between the consultants (independent contractors) and the organization conducting the evaluation, usually on a specified daily rate plus allowable expenses, i.e., travel, communications, etc.
☐ Name or type
Who or what types of persons will serve as consultants?

☐ Service
What service will each consultant perform?

☐ Rate and total time
What is the allowable rate or basis for performing the service, e.g., 10 days @ $500/day?

☐ Reimbursable expenses
Will travel and other required expenses incurred by the consultant during provision of service be reimbursable?

10. Other—Subcontracts
On occasion it is necessary to issue a subcontract for a particular task that your organization is not able to accomplish or a service that someone else can provide at substantial savings in time or money.

☐ Use of subcontract
Will you be issuing a subcontract as a part of the evaluation effort?

☐ Service or product required
What is the service or product for which you will be subcontracting?

☐ Cost of subcontract
What is the expected cost or budgetary limits of planned subcontract(s)?

☐ Status of indirect cost on subcontract
Will the subcontract(s) be subject to indirect or overhead costs?

11. In-Kind or Cost Sharing
Some evaluations may require cost sharing or in-kind contributions as a condition of the proposal. On the other hand, an entity may voluntarily offer an in-kind contribution as a part of the proposal, which may increase the attractiveness of the offer to perform the required services. Normally, in-kind contributions are more commonly a part of evaluations supported by grants, as opposed to contracts. When an in-kind contribution, whether a part of personnel time, use of services or equipment, etc., is included as a part of a budget, the institution/agency is as accountable for these costs as for other costs that may be supported by external sources. In some cases, cost sharing is required and/or voluntarily included in a proposal. In effect, cost sharing is a form of an in-kind contribution.

☐ Required contribution
Is an in-kind or cost-sharing contribution required?

☐ Basis of value of contribution
What is the basis for calculating and the computed value of the services or personnel offered as an in-kind or cost-sharing contribution?
12. Indirect/Overhead

Institutional administration, use of facilities, accounting services, and other costs that are not or cannot be reasonably listed as line item costs are referred to as indirect costs. Basically, they are the costs that the institution incurs for the conduct of the evaluation on the campus or in the organization over and above those specified in the budget. Institutions that have experience with externally funded projects will likely have a federally negotiated indirect rate for several types of projects, i.e., on-campus research, off-campus research, on-campus instruction, etc. Most evaluations of educational programs will fall into the off-campus research category. Usually, the indirect rate is a percentage of the total direct costs and a percentage of all salaries and wages with the possible exclusion of such costs as equipment or subcontracts.

☐ Federally negotiated audit  Does your organization have a federally negotiated indirect cost rate based on an official audit by a cognizant federal agency or department?

☐ Basis of indirect computation  What is the basis for the computed indirect rate, i.e., total direct costs, modified to salaries and wages, etc.?

☐ Indirect category  What is the appropriate indirect category for this evaluation?

☐ Allowable indirect  Does the funding agency/organization specify a condition for an indirect rate, i.e., maximum rate, basis for calculation, etc.?
