Utilization-Focused Evaluation begins with the premise that evaluations should be judged by their utility and actual use; therefore, evaluators should facilitate the evaluation process and design any evaluation with careful consideration of how everything that is done, from beginning to end, will affect use. Use concerns how real people in the real world apply evaluation findings and experience and learn from the evaluation process. The checklist is based on Essentials of Utilization-Focused Evaluation (Patton, 2012). All references in the checklist to exhibits and menus refer to this book.

Step 1 Assess and build program and organizational readiness for utilization-focused evaluation.
Step 2 Assess and enhance evaluator readiness and competence to undertake a utilization-focused evaluation.
Step 3 Identify, organize, and engage primary intended users.
Step 4 Conduct situation analysis with primary intended users
Step 5 Identify primary intended uses by establishing the evaluation’s priority purposes.
Step 6 Consider and build in process uses if appropriate.
Step 7 Focus priority evaluation questions.
Step 8 Check that fundamental areas for evaluation inquiry are being adequately addressed.
Step 9 Determine what intervention model or theory of change is being evaluated.
Step 10 Negotiate appropriate methods to generate credible findings and support intended use by intended users.
Step 11 Make sure intended users understand potential controversies about methods and their implications.
Step 12 Simulate use of findings.
Step 13 Gather data with ongoing attention to use.
Step 14 Organize and present the data for use by primary intended users.
Step 15 Prepare an evaluation report to facilitate use and disseminate significant findings to expand influence.
Step 16 Follow up with primary intended users to facilitate and enhance use.
Step 17 Metaevaluation of use: Be accountable, learn, and improve. Understand and take advantage of the external environment and its influence on the organization.
**Complete Utilization-Focused Evaluation Checklist:**

*Seventeen steps to evaluations that are useful—and actually used.*

The checklist has two columns. Primary U-FE tasks are in the column on the left. Because of the emphasis on facilitation in U-FE, particular facilitation challenges are identified in the column on the right. Basic premises are presented for each step to provide a context for the primary tasks and special facilitation challenges.

**Step 1. Assess and build program and organizational readiness for evaluation.**

**Premise**

Programs and organizations that are ready to seriously engage in evaluation are more likely to participate in ways that enhance use. Use is more likely if key people who will be involved in and affected by the evaluation become interested in evidence-based reality testing, evaluative thinking, and use.

**Premise**

The U-FE evaluator must engage those involved in an evaluation in ways that will deepen their understanding of evaluation and commitment to use. Evaluability assessment includes examining if the program and organizational cultures are receptive to and ready for evaluation.

**Primary Tasks**

- Assess the commitment of those commissioning and funding the evaluation to doing useful evaluation.
- Assess the evaluation context:
  - Review important documents and interview key stakeholders.
  - Conduct a baseline assessment of past evaluation use.
  - Find out current perceptions about evaluation.
- When ready to engage, plan a launch workshop that will involve key stakeholders to both assess and build readiness for evaluation.
  - Work with key stakeholders to launch the evaluation.
  - Make the launch workshop an opportunity to further assess readiness for evaluation as well as enhance readiness.

**Evaluation Facilitation Challenges**

- Explaining U-FE and assessing readiness for evaluation generally and U-FE specifically
- Conducting individual and/or focus group interviews to get baseline information
- Building trust for honest discussions about how evaluation is viewed
- Agreeing on which diverse stakeholders to involve in the launch workshop
- Planning the launch workshop to deepen the commitment to reality testing and use
- Creating a positive vision for evaluation and assessing incentives for and barriers to engaging in evaluation
- Generating specific norms to guide the evaluation process
Introduce the standards for evaluation as the framework within which the evaluation will be conducted. (Joint Committee, 2011)

Based on the initial experience working with key stakeholders, assess what needs to be done next to further enhance readiness, build capacity, and move the evaluation forward.

Step 2. Assess and enhance evaluator readiness and competence to undertake a utilization-focused evaluation.

Premise
Facilitating and conducting a utilization-focused evaluation requires a particular philosophy and special skills.

Primary Tasks
- Assess the evaluator's essential competencies:
  1. Professional practice knowledge
  2. Systematic inquiry skills
  3. Situational analysis skills
  4. Project management skills
  5. Reflective practice competence
  6. Interpersonal competence
  7. Cultural competence
- Assess the match between the evaluator's commitment and the likely challenges of the situation.

Premise
Evaluation facilitators need to know their strengths and limitations and develop the skills needed to facilitate utilization-focused evaluations.

Evaluation Facilitation Challenges
- As an evaluator, being rigorously reflexive about your strengths and weaknesses
- In working with primary intended users, being forthright about those strengths and weaknesses
- Engaging in ongoing professional development to build on strengths and reduce weaknesses
- Matching the evaluator’s competencies with what is needed to work effectively with a particular group of primary intended users, evaluation situation, and set of challenges
Assess the match between the evaluator’s substantive knowledge and what will be needed in the evaluation.

Adapt the evaluation as the process unfolds.

Assess whether a single evaluator or a team is needed and the combination of competencies that will be needed in a team approach.

Assure that the evaluators are prepared to have their effectiveness judged by the use of the evaluation by primary intended users.

Demonstrating sufficient substantive knowledge of the program being evaluated to have credibility with key stakeholders and be able to facilitate discussions on substantive issues

Working with primary intended users in an active-reactive-interactive-adaptive style

Working together as a team offers opportunity for mutual support and greater diversity of competencies brought to the evaluation but adds the complication of integrating team members into an effective working group

Keeping the whole evaluation process focused on the outcome of intended use by intended users

Step 3. Identify, organize and engage primary intended users.

Premise
Identifying, organizing, and engaging primary intended users optimizes the personal factor, which emphasizes that an evaluation is more likely to be used if intended users are involved in ways they find meaningful, feel ownership of the evaluation, find the questions relevant, and care about the findings. Primary intended users are people who have a direct, identifiable stake in the evaluation.

Premise
The U-FE facilitator has a stake in evaluation use and therefore an interest in identifying and working with primary intended users to enhance use.

Primary Tasks
Find and involve primary intended users who are
- Interested
- Knowledgeable
- Open
- Connected to important stakeholder constituencies
- Credible
- Teachable
- Committed and available for interaction throughout the evaluation process

Evaluation facilitation challenges
- Determining real interest; building interest as needed; sustaining interest throughout the U-FE process
- Determining knowledge of users; increasing knowledge as needed
- Facilitating an evaluation climate of openness
- Working with primary intended users to examine stakeholder connections and their implications for use
- Building and sustaining credibility of the evaluation working group made up of primary intended users
• Explain the role of primary intended users throughout the evaluation process.

• Organize primary intended users into a working group for decision-making and involvement.

• Involve intended users throughout all steps of the U-FE process.

• Monitor ongoing availability, interest, and participation of primary intended users to keep the process energized and anticipate turnover of primary intended users.

• Orient any new intended users added to the evaluation working group along the way.

---

**Step 4. Situation analysis conducted jointly with primary intended users.**

**Premises**

Evaluation use is people- and context-dependent. Use is likely to be enhanced when the evaluation takes into account and is adapted to crucial situational factors.

**Primary Tasks**

- Examine the program’s prior experiences with evaluation and other factors that are important to understand the situation and context. (See Exhibits 4.1, 4.4, and 4.5, Patton, 2012).

**Premises**

The evaluator has responsibility to work with primary intended users to identify, assess, understand, and act on situational factors that may affect use. Situation analysis is ongoing.

**Evaluation Facilitation Challenges**

- Working with intended users to identify and strategize about critical factors that can affect the priority questions, evaluation design, and evaluation use.
Identify factors that may support and facilitate use. (Force field analysis, Exhibits 4.2 and 4.3, Patton, 2012).

Look for possible barriers or resistance to use. (Force field analysis, Exhibits 4.2 & 4.3).

Determine resources available for evaluation.

Identify any upcoming decisions, deadlines, or time lines that the evaluation should meet to be useful.

Assess leadership support for and openness to the evaluation.

Understand the political context for the evaluation and calculate how political factors may affect use.

Assess how the evaluator’s relationship to the program (internal v. external) might affect use” (See Exhibit 4.6, Patton, 2012).

Determine the appropriate evaluation team composition to ensure needed expertise, credibility, and cultural competence.

Attend to both
- tasks that must be completed
- relationship dynamics that support getting tasks done.

Analyze risks related to
- ideas
- implementation
- evidence. (See Exhibit 4.8, Patton, 2012)

Continue assessing the evaluation knowledge, commitment, and experiences of primary intended users.
Steps 1 to 4 interim outcomes check and complex systems interconnections review.

Overall situation analysis:

- How good is the match between the evaluation team’s capacity, the organization’s readiness and evaluation needs, and the primary intended users’ readiness to move forward with the evaluation?

- Understanding and taking into account system dynamics and interrelationships as the evaluation unfolds
- Being attentive to and adapting to complex system dynamics as they emerge
- Staying active-reactive-interactive-adaptive throughout the evaluation

**Step 5. Identify and prioritize primary intended uses by determining priority purposes.**

**Premise**

Intended use by primary intended users is the U-FE goal. Use flows from clarity about purpose.

**Primary Tasks**

- Review alternative purposes with primary intended users.
  - Consider how evaluation could contribute to program improvement.
  - Consider how summative evaluation judgments could contribute to making major decisions about the program.
  - Consider accountability uses
  - Consider monitoring uses
  - Consider developmental use
  - Consider how evaluation could contribute by generating knowledge.

**Premise**

The menu of evaluation options should be reviewed, screened and prioritized by primary intended users to clarify the primary purposes and uses of the evaluation.

**Evaluation Facilitation Challenges**

- Helping primary intended users understand evaluation purpose options and the importance of prioritizing the evaluation’s purpose
- Guiding primary intended users in reviewing potential formative evaluation uses
- Guiding primary intended users in reviewing summative evaluation opportunities to inform major decisions based on judgments of merit, worth, and significance
- Guiding users in assessing oversight and compliance issues, and the accountability context for the evaluation
- Guiding users in examining the relationship between monitoring and evaluation
- Guiding users in distinguishing developmental evaluation from other uses, especially program improvement (i.e., the difference between improvement and development)
- Guiding primary intended users in considering the possibility of using evaluation to generate lessons learned and evidence-based practices that might apply beyond the program being evaluated
Prioritize the evaluation’s purpose.

- Working with primary intended users to establish priorities and resolve conflicts over competing purposes, avoiding ambiguity or confusion about priorities
- Avoiding the temptation to dabble in a little bit of everything

Step 6. Consider and build in process uses if and as appropriate.

Premise
The processes undertaken in how an evaluation is conducted have impacts on those involved with the evaluation.

Primary Tasks
- Review alternative process uses with primary intended users.
  - Consider how evaluative thinking might be infused into the organization culture as part of doing the evaluation.
  - Consider how the way in which the evaluation is conducted and who is involved can enhance shared understandings.
  - Consider possibilities for using evaluation processes to support and reinforce the program intervention.
  - Consider potential instrumentation effects and reactivity as process uses to be made explicit and enhanced.
  - Consider how the evaluation might be conducted in ways that increase skills, knowledge, confidence, self-determination, and a sense of ownership among those involved in the evaluation, included the program’s staff and intended beneficiaries.
  - Consider how evaluation could contribute to program and organizational development.

Premise
The menu of process use options should be reviewed, screened, and prioritized by primary intended users to determine any appropriate process uses of the evaluation.

Evaluation Facilitation Challenges
- Helping primary intended users understand process use options and the potential importance of process uses as intentional, thereby adding value to the evaluation
- Guiding primary intended users in reviewing potential program and organizational culture impacts of evaluation, and whether to enhance and make them intentional
- Guiding primary intended users in considering communication issues and areas where shared understandings could be enhanced through involvement in the evaluation process
- Examining the potential interaction effects between how the evaluation is conducted, including how data are gathered, and attaining the desired outcomes of the intervention.
- Facilitating examination of the potential effects of measurement as exemplified in the adage: “what gets measured gets done”
- Guiding users in considering evaluation approaches that are participatory, collaborative, empowering, inclusive, and democratic-deliberative in which evaluation processes have the goal of building capacity, enhancing skills, and giving voice to those whose voices are less often heard
- Considering the option of the evaluator becoming part of a development team involved in innovation and ongoing adaptation based on developmental evaluation (Patton, 2012, pp. 127-8; 160)
- Guiding users through the controversies surrounding various types of process uses
- Examining potential pluses and minuses, including potential effects on the evaluation’s credibility
- Reviewing time and cost implications
- Facilitating a complex systems understanding of how process uses and findings uses may be interconnected, interactive, and mutually interdependent
- Having reviewed process options, working with primary intended users to establish priorities
- Resolving conflicts over competing purpose
- Avoiding dabbling in a little bit of everything
- Avoiding ambiguity or confusion about priorities

Step 7. Focus priority evaluation questions.

Premise
No evaluation can look at everything. Priorities have to be determined. Focusing is the process for establishing priorities.

Primary Tasks
- Apply criteria for good utilization-focused evaluation questions:
  - Questions can be answered sufficiently well to inform understanding and support action.
    - Questions can be answered in a timely manner and at reasonable cost.
    - Data can be brought to bear on the questions, that is, they aren’t primarily philosophical, religious, or moral questions.
    - The answer is not predetermined by the phrasing or framing of the question.
- Examine the relationship and interconnections between potential process uses and findings use (Step 5).

Evaluation Facilitation Challenges
- Helping primary intended users create a culture of inquiry and learning
- Facilitating discussion of the connections between asking questions, getting answers, and taking action
- Guiding primary intended users in considering resource and time line realities
- Guiding users in understanding what kinds of questions can and cannot be answered with data
- Guiding users in being open to genuine empirical inquiry—aiming to learn and find
• The primary intended users want the question answered; they have identified it as important and can say why.
• The answer is actionable; intended users can indicate how they would use the answer to the question for future decision-making and action.

Listen carefully to the priority concerns of primary intended users to help them identify important questions.

Connect priority questions to the intended purpose and uses of the evaluation to assure that they match.

Offer a menu of focus options (see Menu 7.1, Patton, 2012, pp. 182-187).

Step 8. Check that fundamental areas for evaluation inquiry are being adequately addressed.

Premise
Implementation, outcomes, and attribution questions are fundamental.

Premise
Evaluators should be sure that primary intended users have considered the issues and options involved in evaluating program implementation, outcomes, and attribution.

Primary Tasks
Consider options for implementation evaluation that address the question, “What happens in the program?”
• Effort and input evaluation
• Process evaluation
• Component evaluation
• Treatment specification and intervention dosage

Consider options for outcomes evaluation to answer these questions:
• What results from the program?
• How are participants changed, if at all, as a result of program participation?
• To what extent are the program’s goals achieved?
• What unanticipated outcomes occur?

Evaluation Facilitation Challenges
• Helping primary intended users determine what implementation evaluation questions should have priority given the stage of the program’s development, the priority decisions the evaluation will inform, and the resources available for evaluation

• Assessing evaluability: Are the program’s goals sufficiently specific, measurable, achievable, relevant, and time-bound (SMART) to be ready for outcomes evaluation?

• Determining which outcomes, among the many a program may have, are the priority for evaluation
• To what extent are participants’ needs met by the program?

– Determining which outcomes evaluation questions will yield the most useful findings
– Completing the utilization-focused evaluation framework for outcomes evaluation that differentiates target subgroup, desired outcome, outcome indicator, data collection, performance target, and intended use of the outcomes data

☐ Determine the importance and relative priority of the attribution issue: To what extent can outcomes be attributed to the program intervention?

– Helping primary intended users understand the conceptual and methodological issues involved in asking questions about causality and generating credible evidence to support judgments about attribution

Step 9. Determine what intervention model or theory of change is being evaluated.

Premise
A program or intervention can usefully be conceptualized as a model or theory which describes how intended outcomes will be produced. Evaluation can include testing the model or theory.

Primary Tasks
☐ Determine if logic modeling or theory of change work will provide an important and useful framework for the evaluation.

☐ Consider options for conceptualizing a program or intervention—or different elements of a program or change initiative:
  • a linear logic model
  • a map of systems relationships
  • a complex adaptive system

☐ Appropriately match the evaluation design and measurement approach to how the

Premise
Evaluators should be sure that primary intended users have considered the issues and options involved in evaluating the program’s model or theory of change. How a theory of change is conceptualized will have important implications for how the evaluation is designed and conducted

Evaluation Facilitation Challenges
– Helping intended users understand the purposes of a logic model or theory of change for evaluation
– Explaining the differences between a logic model and theory of change
– Assessing the costs and benefits of using a logic model or theory of change to frame the evaluation
– Helping primary intended users understand and engage the differences among different conceptual approaches: logic models, systems thinking, and complex adaptive systems
– Helping intended users understand the implications of conceptualizing the
program or intervention is conceptualized, understanding that linear logic models, systems maps, and complex nonlinear conceptualizations of interventions have both conceptual and methodological implications.

Step 10. Negotiate appropriate methods to generate credible findings that support intended use by intended users.

Premise
The evaluation should be designed to lead to useful findings. Methods should be selected and the evaluation designed to support and achieve intended use by primary intended users.

Premise
Involving primary intended users in methods decisions increases their understanding of the strengths and weaknesses of the methods used and deepens their understanding of data collection decisions, which supports the commitment to use the resultant findings.

Primary Tasks
- Select methods to answer users’ priority questions so that the results obtained will be credible to primary intended users.
- Assure that the proposed methods and measurements are
  - Appropriate
  - Practical
  - Cost-effective
  - Ethical
- Assure that the results obtained from the chosen methods will be able to be used as intended.
- Negotiate trade-offs between design and methods ideals and what can actually be intervention in different ways:
  - Designing an evaluation to test causal attribution hypotheses by specifying a linear model in which the connections are clear, logical, sequential, plausible – and testable
  - Creating a meaningful systems map that provides insights into relationships and constitutes a baseline of systems interrelationships for purposes of evaluation.
  - Generating shared understandings around the evaluation implications of complex situations characterized by high uncertainty about how to produce desired outcomes, high disagreement among key stakeholders about what to do, and unpredictable and uncontrollable causality

Evaluation Facilitation Challenges
- Making sure that primary intended users play an active role in reviewing methods to examine their appropriateness and credibility
- Taking time to think through methods choices and their implications with intended users
- Finding the right level of engagement with intended users—the “sweet spot,” neither overly technical, nor overly simplistic
- Negotiating criteria for methodological quality and what constitutes credible evidence among key stakeholders
implemented given inevitable constraints of resources and time.

- Making the evaluator’s own stake in a quality evaluation explicit and part of the negotiations without allowing the evaluator to become the unilateral decision maker about methods
- Helping intended users consider the implications for use of methods and measurement decisions
- Keeping primary intended users engaged with and informed about necessary changes and adaptations in methods as the evaluation unfolds

**Step 11. Make sure intended users understand potential methods controversies their implications.**

**Premises**

The methodological gold standard is methodological appropriateness. Appropriate methods are those that answer users’ priority questions. Involving intended users in methods decisions means that evaluators and intended users need to understand paradigm-based methods debates and their implications for the credibility and utility of a particular evaluation.

**Premises**

Evaluators need to be able to facilitate choices that are appropriate to a particular evaluation’s purpose. This means educating primary stakeholders about the legitimate options available, the strengths and weaknesses of various approaches, the potential advantages and costs of using multiple and mixed methods, and the controversies that surround such choices.

**Primary Tasks**

- Select methods appropriate to the questions being asked.

- Discuss with intended users relevant methods debates that affect the methods choices in a particular evaluation, if appropriate and helpful to support decision making about methods. Issues to consider include:
  - Quantitative versus Qualitative data
  - The Gold Standard Debate (experimental versus non-experimental designs)
  - Randomization versus naturally occurring and purpose sampling approaches
  - Internal versus external validity as a design priority

- Making sure that methods are selected jointly by primary intended users and the evaluator(s) based on appropriateness
- Helping primary intended users understand and consider how broader methodological debates may affect the credibility and utility of the particular evaluation being designed.
- Keeping the discussion about methodological debates practical and useful rather than academic and pedantic
- Resolving conflicts that may occur among primary intended users on different sides of the issue
- Offering a paradigm of choices based on methodological appropriateness given
• Generalizations versus context-sensitive extrapolations
• Pragmatism versus methodological purity

Step 12. Simulate use of findings.

Premise
Before data are collected, a simulation of potential use done with fabricated findings is real enough to provide a meaningful learning experience for primary intended users.

Primary Tasks
☐ Fabricate findings based on the proposed design and measures of implementation and outcomes.
☐ Guide primary intended users in interpreting the potential (fabricated) findings.
☐ Interpret the simulation experience to determine if any design changes, revisions, or additions to the data collection would likely increase utility.
☐ As a final step before data collection, have primary intended users make an explicit decision to proceed with the evaluation given likely costs and expected uses.

Evaluation facilitation challenges
– Fabricating realistic findings that show varying results and offer good grist for simulated interaction among primary intended users
– Helping primary intended users take the simulation seriously so that they can use the experience to improve design and be better prepared for real use of findings
– Taking time to do this final, critical check and make final design and measurement revisions before data collection
– Assuring that primary intended users feel ownership of the design and measures
– Helping primary intended users seriously ask: Given expected costs and intended uses, is the evaluation worth doing?

Step 13. Gather data with ongoing attention to use.

Premise
Data collection should be managed with use in mind.

Primary Tasks
☐ Effectively manage data collection to ensure data quality and evaluation credibility.

Evaluation facilitation challenges
– Staying on top of data collection problems and taking corrective steps before small issues become major ones.
- Being transparent with intended users about how data collection is unfolding and alerting them to any important deviations from the planned design
- Working with, training, and coaching non-researchers in the basics of data collection.
- Ensuring quality data when using non-researchers for data collection.
- Keeping primary intended users informed about issues that emerge in participatory data collection processes
- Providing just enough information to maintain interest without getting intended users bogged down in too much detail
- Meeting diverse interest and needs as different key stakeholders may want different amounts of information along the way
- Avoiding inappropriate micro-managing by primary intended users
- Providing feedback to enhance data collection without inappropriately affecting responses or evaluation credibility
- Alleviating inappropriate anxiety among those providing data or among program staff receiving early feedback about the evaluation findings
- Finding the right amount and nature of timely feedback to offer
- Ensuring that interim findings are treated as interim and therefore not disseminated
- Maintaining the confidentiality of interim findings reported
- Providing enough feedback to maintain interest but not so much as to be annoying or intrusive
- Integrating new key stakeholders into an ongoing group of primary intended users
- Taking into account the potentially divergent views and different priorities of a new primary intended user when data collection is already under way
- Facilitate understanding, engagement and buy-in among any new primary intended users.

**Step 14. Organize and present the data for interpretation and use by primary intended users.**

**Premises**

Findings should be organized and presented to facilitate use by primary intended users. Analysis, interpretation, judgment and recommendations should be distinguished.

**Premise**

Facilitating data interpretation among primary intended users increases their understanding of the findings, their sense of ownership of the evaluation, and their commitment to use the findings.

**Primary Tasks**

- Organize data to be understandable and relevant to primary intended users:
  - Organize the findings to answer priority questions.
  - Keep presentations simple and understandable.
  - Provide balance.
  - Be clear about definitions.
  - Make comparisons carefully and appropriately.
  - Decide what is significant.
  - Be sure that major claims are supported by rigorous evidence.
  - Distinguish facts from opinion.

- Actively involve users in interpreting findings:
  - Triangulate evaluation findings with research findings.
  - Consider and compare alternative interpretations and explanations.

- Actively involve users in making evaluative judgments:
  - Be clear about the values that undergird judgments.

- Actively involve users in generating recommendations, if appropriate and expected:

**Evaluation Facilitation Challenges**

- Organizing the raw data into an understandable and useable format that addresses and illuminates priority evaluation questions
- Keeping the initial interactions focused on what the data reveal before moving into interpretations and judgments
- Helping users distinguish between findings and interpretations
- Working with users to think about what is significant and consider alternative explanations for the findings before drawing definitive conclusions
- Taking time to fully engage the findings before generating action recommendations
- Helping users make explicit the values on which judgments are made.
- Helping users distinguish between findings, interpretations, judgments, and
- Distinguish different kinds of recommendations.
- Discuss the costs, benefits, and challenges of implementing recommendations.
- Focus on actions within the control of intended users and those they can influence.

☐ Examine the findings and their implications from various perspectives.

- Making sure that recommendations follow from and are supported by the findings.
- Planning time to do a good job on recommendations

- Offering opportunities and taking the time to reflect on the analytical process and learn from it
- Helping users distinguish varying degrees of certainty in the findings
- Being open and explicit about data strengths and limitations

**Step 15. Prepare an evaluation report to facilitate use and disseminate findings to expand influence.**

**Premise**
Different kinds and formats of reports are needed for different evaluation purposes. Reports should be focused on serving priority intended uses of primary intended users.

**Premise**
Working with primary intended users to review reporting and dissemination options increases the likelihood of appropriate and meaningful use as well as the possibility of wider influence.

**Primary Tasks**
- Determine what kinds of reporting formats, styles, and venues are appropriate:
  - Consider both formal written reports and less formal oral reports.
  - Adapt different report approaches for different audiences and uses.
  - Focus the report on answering priority questions and providing the evidence for those answers.
  - Be prepared to help users maintain balance and deal with “negative” findings.

- Deliver reports in time to affect important decisions.

- Decide if the findings merit wider dissemination:
  - Consider both formal and informal pathways for dissemination.

**Evaluation Facilitation Challenges**
- Helping primary intended users calculate the comparative costs and uses of various evaluation reporting approaches
- Involving primary intended users in some reporting opportunities
- Strategizing with intended users about creative ways of reporting findings that may enhance their utility
- Facilitating openness to learning from and appropriately using “negative” findings

- Managing the tension between in-depth involvement of intended users and getting the report done on time
- Helping users distinguish between use and dissemination
• Be alert to unanticipated pathways of influence that emerge as use and dissemination processes unfold.

Step 16. Follow up with primary intended users to facilitate and enhance use.

Premise
The report is not the end of the evaluation. Use is enhanced by following up and working with primary intended users to apply the findings and implement recommendations.

Premise
Facilitating use includes follow up with primary intended users to support taking action on findings and monitoring what happens to recommendations.

Primary Tasks

☐ Plan for follow-up. Develop a follow-up plan with primary intended users.

☐ Budget for follow-up.

☐ Proactively pursue utilization:
  • Adapt findings for different audiences.
  • Keep findings in front of those who can use them.
  • Watch for emergent opportunities to reinforce the relevance of findings.
  • Deal with resistance.
  • Watch for and guard against misuse.

☐ Look for opportunities to add to the evaluation.
  • Opportunities may arise to add data to answer emergent or previously unanswered questions.
  • Longer term follow-up of program participants may become more valued and important to see if short-term outcomes are maintained over time.
  • Designing an evaluation for the next stage of the program may emerge as an opportunity.

☐ Keeping users engaged as dissemination unfolds so that emergent opportunities can be grasped as appropriate

Evaluation Facilitation Challenges

- Helping primary intended users calculate the comparative benefits and uses of various follow-up possibilities
- Encouraging primary intended users to find adequate time and resources to do a good job of following up findings to enhance use. This involves both user and evaluator time and resources
- Helping users make strategic choices about where to focus follow-up efforts
- Keeping users engaged after the report has been disseminated
- Being a champion for use of the findings without becoming perceived as a champion for the program
- Helping primary intended users and other stakeholders see evaluation as an ongoing process rather than a one-time event or moment-in-time report. Findings often give rise to new questions. Questions considered less important at an earlier time can take on new importance once findings have emerged.
Step 17. Metaevaluation of use: Be accountable, learn and improve.

Premise
Metaevaluation is a professional obligation of evaluators. Utilization-focused metaevaluation places particular emphasis on an evaluation’s utility and actual use.

Premise
To be meaningful and useful, metaevaluation must be undertaken seriously and systematically, with time devoted to it.

Primary Tasks

☐ Determine the metaevaluator and the primary intended users for the metaevaluation.

☐ Determine the primary purpose and uses of the metaevaluation.

☐ Determine the primary standards and criteria to be applied in the metaevaluation:
  - Joint Committee Standards (www.jcsee.org)
  - International standards for development evaluation (www.oecd.org/dac/evaluationofdevelopmentprogrammes/)

☐ Budget time and resources for the metaevaluation.

☐ Follow the steps for conducting a utilization-focused evaluation in conducting the utilization-focused metaevaluation.

Metaevaluation Facilitation Challenges

- Selecting an appropriate metaevaluator: The metaevaluator will be different from the evaluator so that the evaluator is not evaluating her or his own work.
- Determining primary intended users—the primary intended users of an evaluation may, or may not, be the same as the primary intended users for the metaevaluation.
- Distinguishing accountability purposes from learning uses and distinguishing internal metaevaluation from external metaevaluation.
- Distinguishing potential utility and usability from actual use—metaevaluation of potential utility may occur earlier than metaevaluation of actual use.
- Taking time to do a good job of metaevaluation, which involves time and resources from both intended users and evaluators.
- Helping users make strategic choices about where to focus follow-up efforts for metaevaluation use.
- Keeping metaevaluation users engaged after the report has been disseminated.
- Being a champion for metaevaluation use of the findings without becoming perceived as a champion for the program.
☐ Engage in systematic reflective practice about the evaluation, its processes and uses, with primary intended users.

☐ Engage in personal reflective practice to support ongoing professional development:
  - Reflect on what went well, and not so well, throughout the evaluation.
  - Assess your essential competencies and skills as an evaluator.
  - Use what you learn to improve your practice and increase use.

● Involving the evaluation’s primary intended users in reflective practice as a metaevaluation exercise to further enhance their own capacities, provide feedback to the evaluator to deepen his or her own reflective practice, and bring closure to the evaluation process.

For both evaluators & metaevaluators:
  ● Following up evaluations (and metaevaluations) to learn what worked and didn’t work, what was useful and not useful.
  ● Committing time to serious reflective practice and learning for ongoing professional development.

This checklist is provided as a free service to the user. The provider of the checklist has not modified or adapted the checklist to fit the specific needs of the user and the user must execute their own discretion and judgment in using the checklist. The provider of the checklist makes no representations or warranties that this checklist is fit for the particular purpose contemplated by the user and specifically disclaims any such warranties or representations.
The steps in the U-FE checklist are necessarily linear and sequential. One step comes before the next. But the actual utilization-focused evaluation process unfolds as a complex, dynamic, and iterative system of relationships with the various elements and steps interacting. Actions lead to reactions, interactions, feedback loops, and adaptations. To depict utilization-focused evaluation as a complex, dynamic, and adaptive system, this graphic depicts the interactions and interdependencies among the steps of the checklist, a reminder of the complex nonlinear dynamics of real world utilization-focused evaluation practice and engagement.
