

Lab Tech Position

Daily roles: Each day you will arrive and collect chemical samples to be tested. Up to 30 samples will be tested per shift. Results from analytical testing are compared to standards and a report is created.

This position requires application of information presented in Chemistry 1 and 2. Lab procedures and tests include:

- Acid/base titrations
- Trace chemical analysis
- Hull-cell electroplating
- Industry-specific testing

Lab techs will be taught how to perform all chemical procedures, and beginner lab experience is acceptable. Upon hire you must be able to:

- Safely handle chemicals
- Follow multi-step chemical procedures
- Maintain records of test results and chemical inventory

You will gain experience in:

- Basic chemistry skills like pipetting, dilutions, measuring, problem solving
- Electrochemistry
- Waste Water testing
- Titrations and analytical chemistry

This is an excellent opportunity to learn about how chemistry is used in industry. Understanding of Chemistry 1 and 2 is appropriate experience.

This position could be part time or full time. The full time position would involve quality tech duties to be determined.
