

Traffic Safety

Toolbox Talk #26

Background

Many shop members spend a significant amount of time driving vehicles around campus. Some of those vehicles may be trucks, golf carts, or typical cars; therefore, they could be driving on the road or sidewalks. It is important for employees to be extremely cautious when driving on campus. The University's campus has a high volume of walking, biking, and vehicular traffic. As a result, the risk of a pedestrian incident is also high. Another risk factor includes the increasing use of mobile devices while traveling. Students on campus endanger themselves by blindly crossing the street and walking around campus because their mobile devices occupy their vision. Drivers must be alert and aware when driving on campus to reduce the possibility of an incident.

Always Yield

Whenever a Pedestrian is attempting to cross the street yield

Drive Slow

When on campus always drive the speed limit

Driving on Sidewalk

Make sure you have a clear path, and avoid driving near large groups of students
