

Evaluative Considerations Regarding Quebec's Freedom of Information Act (FOIA)

Ghislain Arbour,
Evaluation Center Visiting Scholar
from Public Administration National School
(ENAP), Canada

Different and overlapping goals

- A dissertation in public administration that is a policy analysis of Qc's FOIA
 - Aims at the understanding of the law through a certain theoretical perspective
- An evaluation of Qc's FOIA
 - Would (could) aims at the assessment of the effects, efficiency and eventually merit and worth

INFORMATION GOUVERNEMENTALE ET MARCHÉ POLITIQUE:

ÉTUDE DE LA RAISON D'ÊTRE, DE LA
NATURE ET DE LA MISE EN ŒUVRE

DE LA LOI QUÉBÉCOISE D'ACCÈS À
L'INFORMATION

GOVERNEMENTAL INFORMATION AND POLITICAL MARKET:

STUDY OF THE POLITICAL NEED AND
JUSTIFICATION, OF THE CHARACTERISTICS
AND OF THE IMPLEMENTATION

OF QUEBEC'S FREEDOM OF
INFORMATION ACT

Today's agenda

- The dissertation
 - a. FOIAs' universe
 - b. Research problem
 - c. Theoretical framework
 - d. Research questions and methodology
- The evaluation perspective
 1. What kind of program is an FOIA ?
 2. What variables/effects are to (or can) be measured ?
 - Basic causal pathway
 3. Data collection challenges

Quick look at

The dissertation

a. FOIAs' universe

- Qc's FOIA (like the one in the US) provides a right to access various *documents* from *public bodies*.
- The right is implemented through a regulated information request process.
- Information Officer (IO) centralize the outside flow of information in a public body by their decisions over information requests.

a. FOIAs' universe

- The general right of access is shaped by different constraints or parameters (exceptions):
 - What document / info ?
 - What public bodies ?
 - When is it going to be available ?
 - **Discretionary or mandatory dissemination ?**
 - Peripheral obligations (web dissemination, systematic release)

b. Research Problem

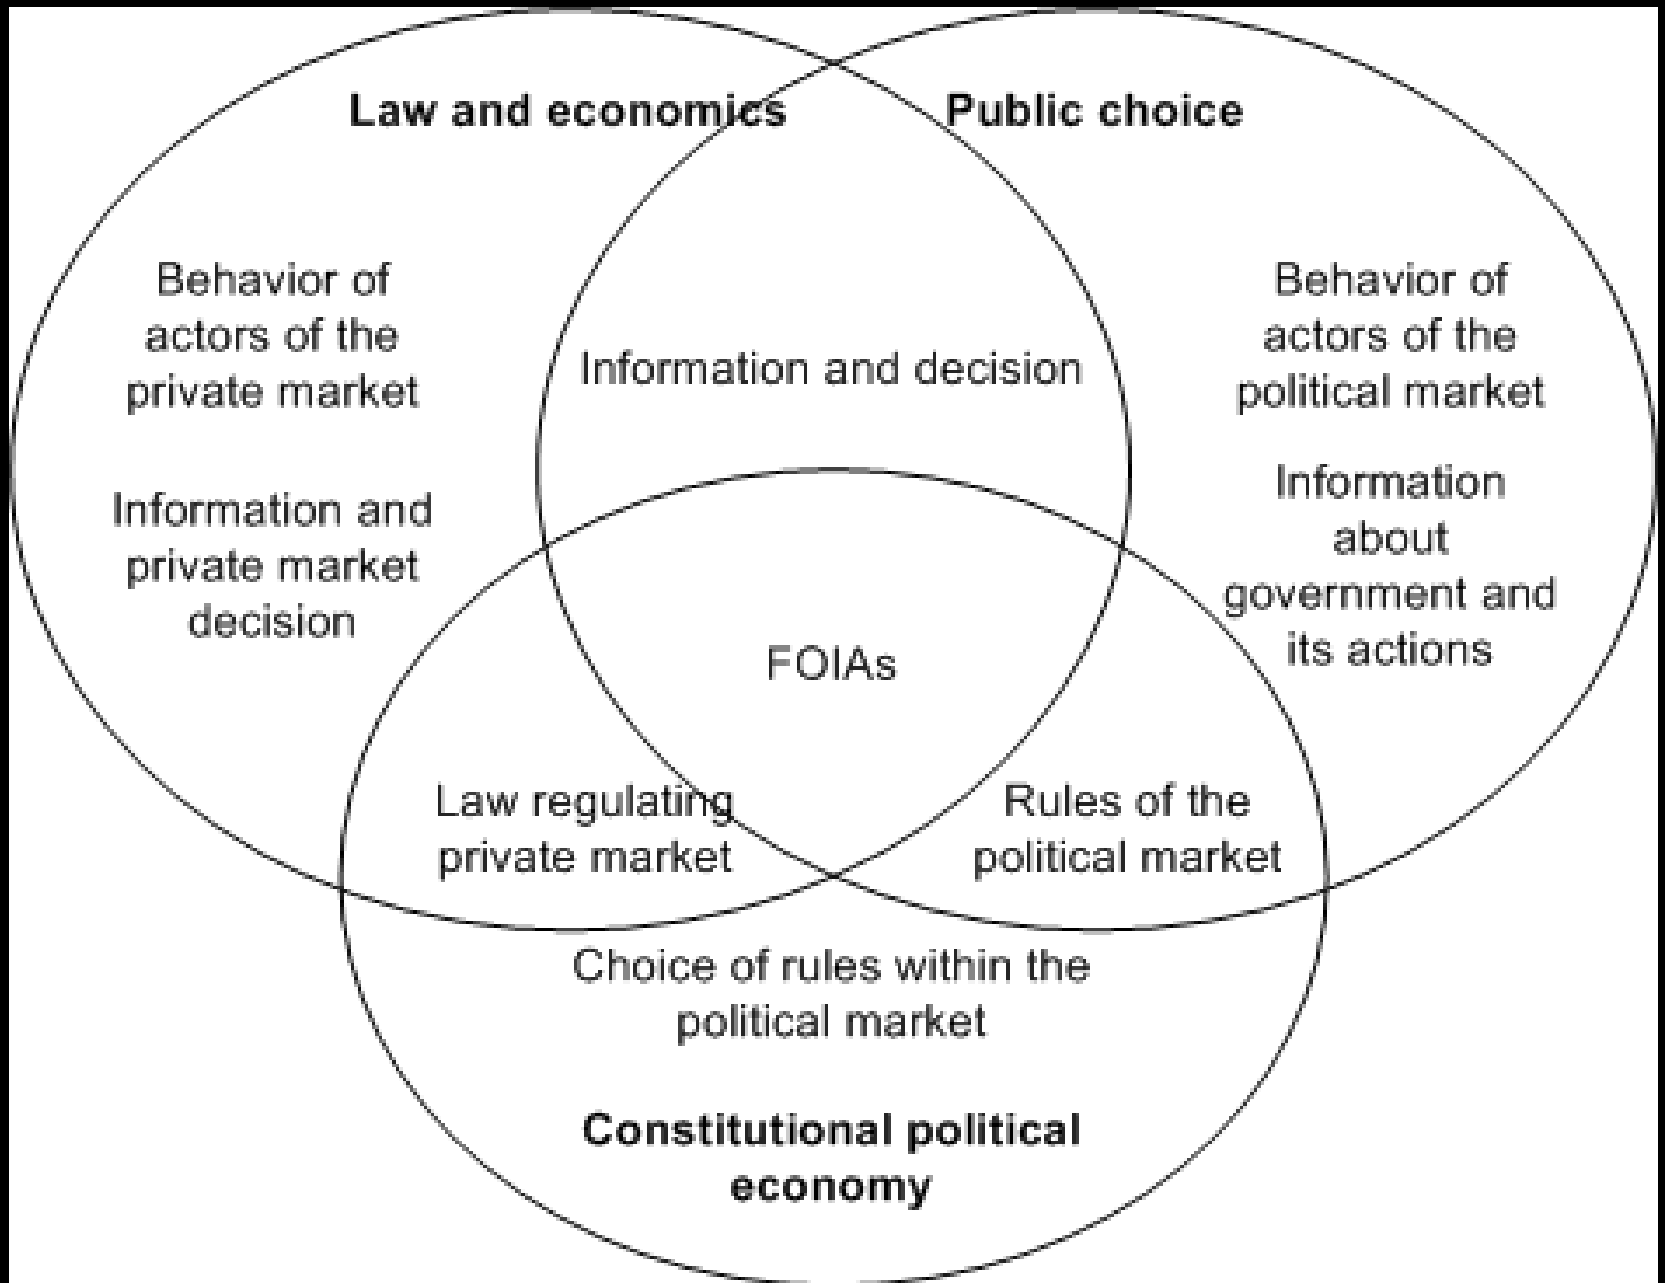

- Theoretical dimension
 - Explaining governmental information and FOIAs' roles in the accountability relationship that links the government and citizens.
- Empirical dimension
 - The positive and normative appreciation of Qc's FOIA
 - ... and implementation of Qc's FOIA
 - ...With a non traditional theoretical perspective

c. Theoretical framework

- 3 political economy schools
 - Public choice
 - Constitutional political economy
 - Law & Economics
- Focus on incentives & consequences of institutional settings
- Building up an original framework adapted to FOIAs using analogies and logical deductions.
 - Accountability point of view between government vs citizen (agency problem)

c. Theoretical framework in few words

- “Rational” actor: people seek their interest as they see it in their decisions
- Information = reduction of uncertainty
- Politics as a complex set of transactions made through political institutions
- Efficient political system = informed citizens

c. Theoretical framework in few words

- Information is valued, hence governmental information is valued
- Citizens' decisions need information regarding governmental action / responsibilities (agency problem)
- The monitored is the main detainer / producer of governmental information
- Artificial rarity of governmental information

c. Theoretical framework

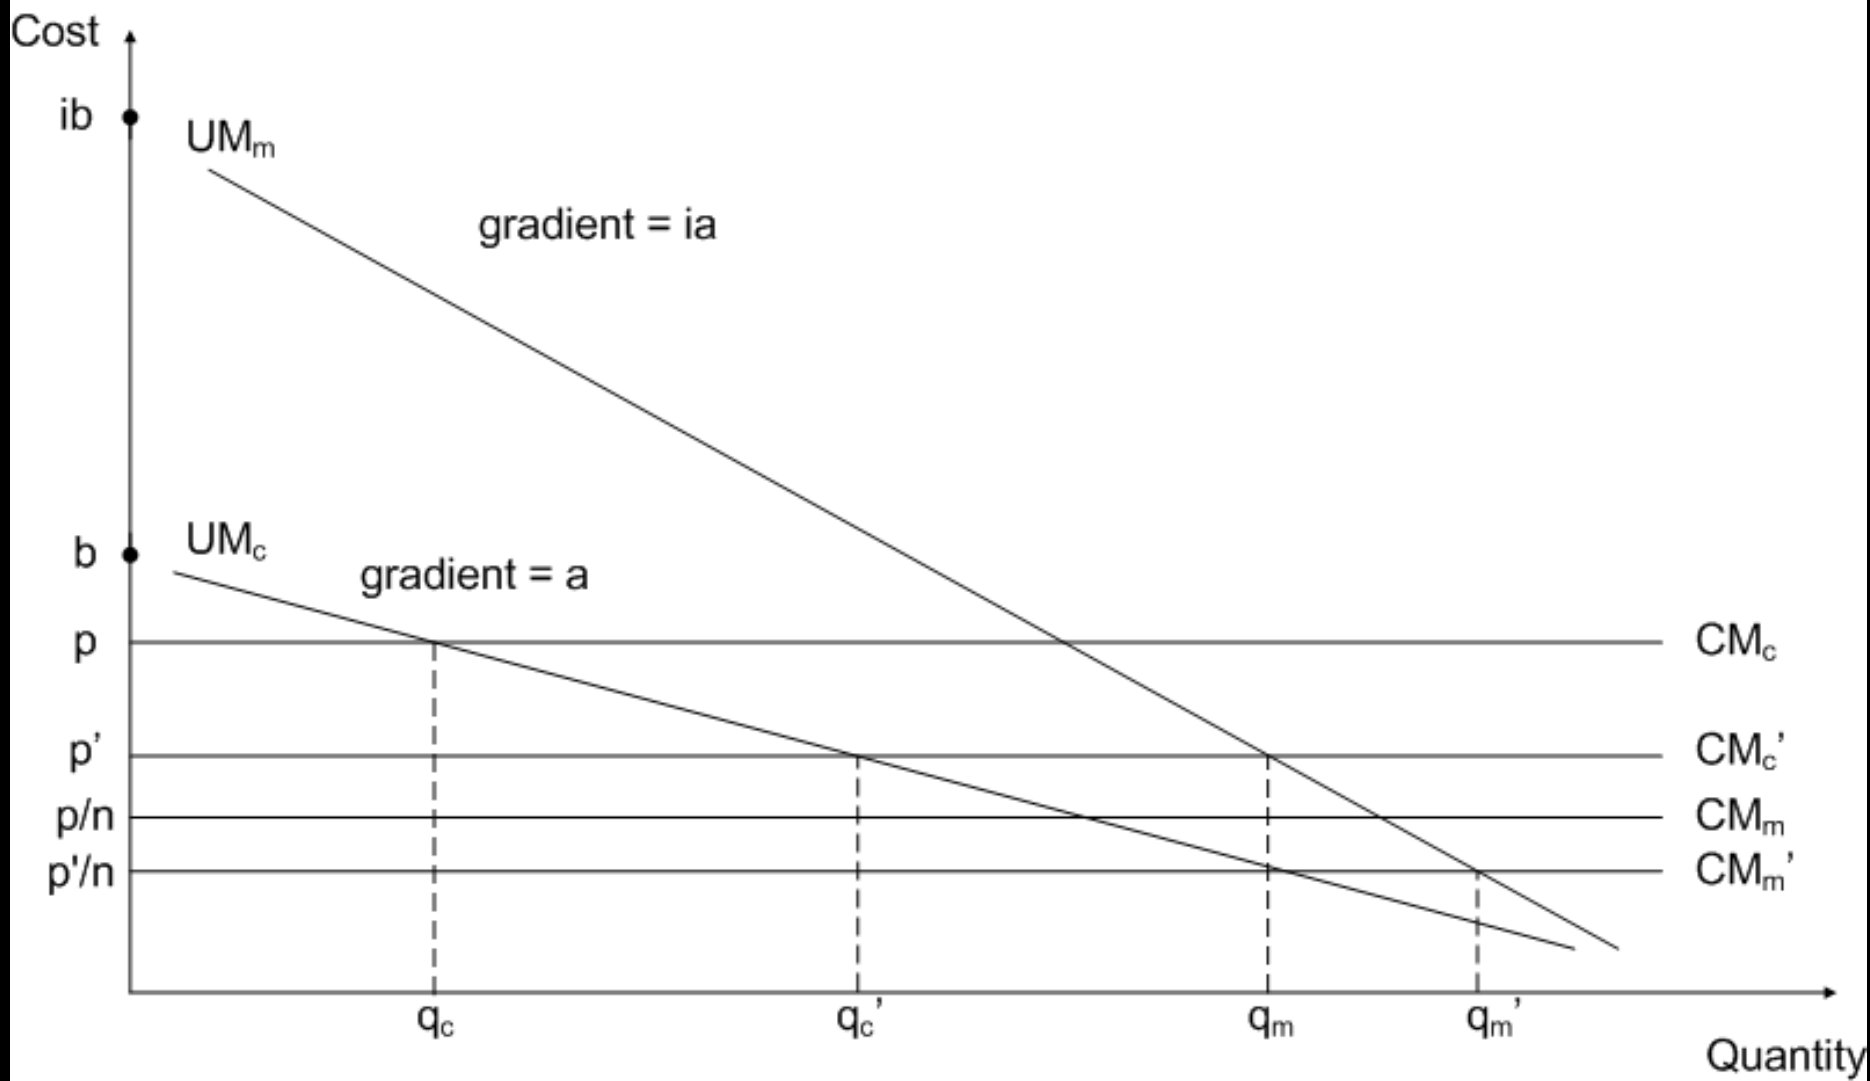

- Differences in capacity to access and use information between citizen and interested groups (+ pol.).
- Information (power) asymmetry generates biases the outcomes of the political system (“bad” policies).
- FOIAs are justified to force public bodies to behave, regarding transparency, in a way they wouldn't have if they were left to themselves.

Equation on information asymmetry

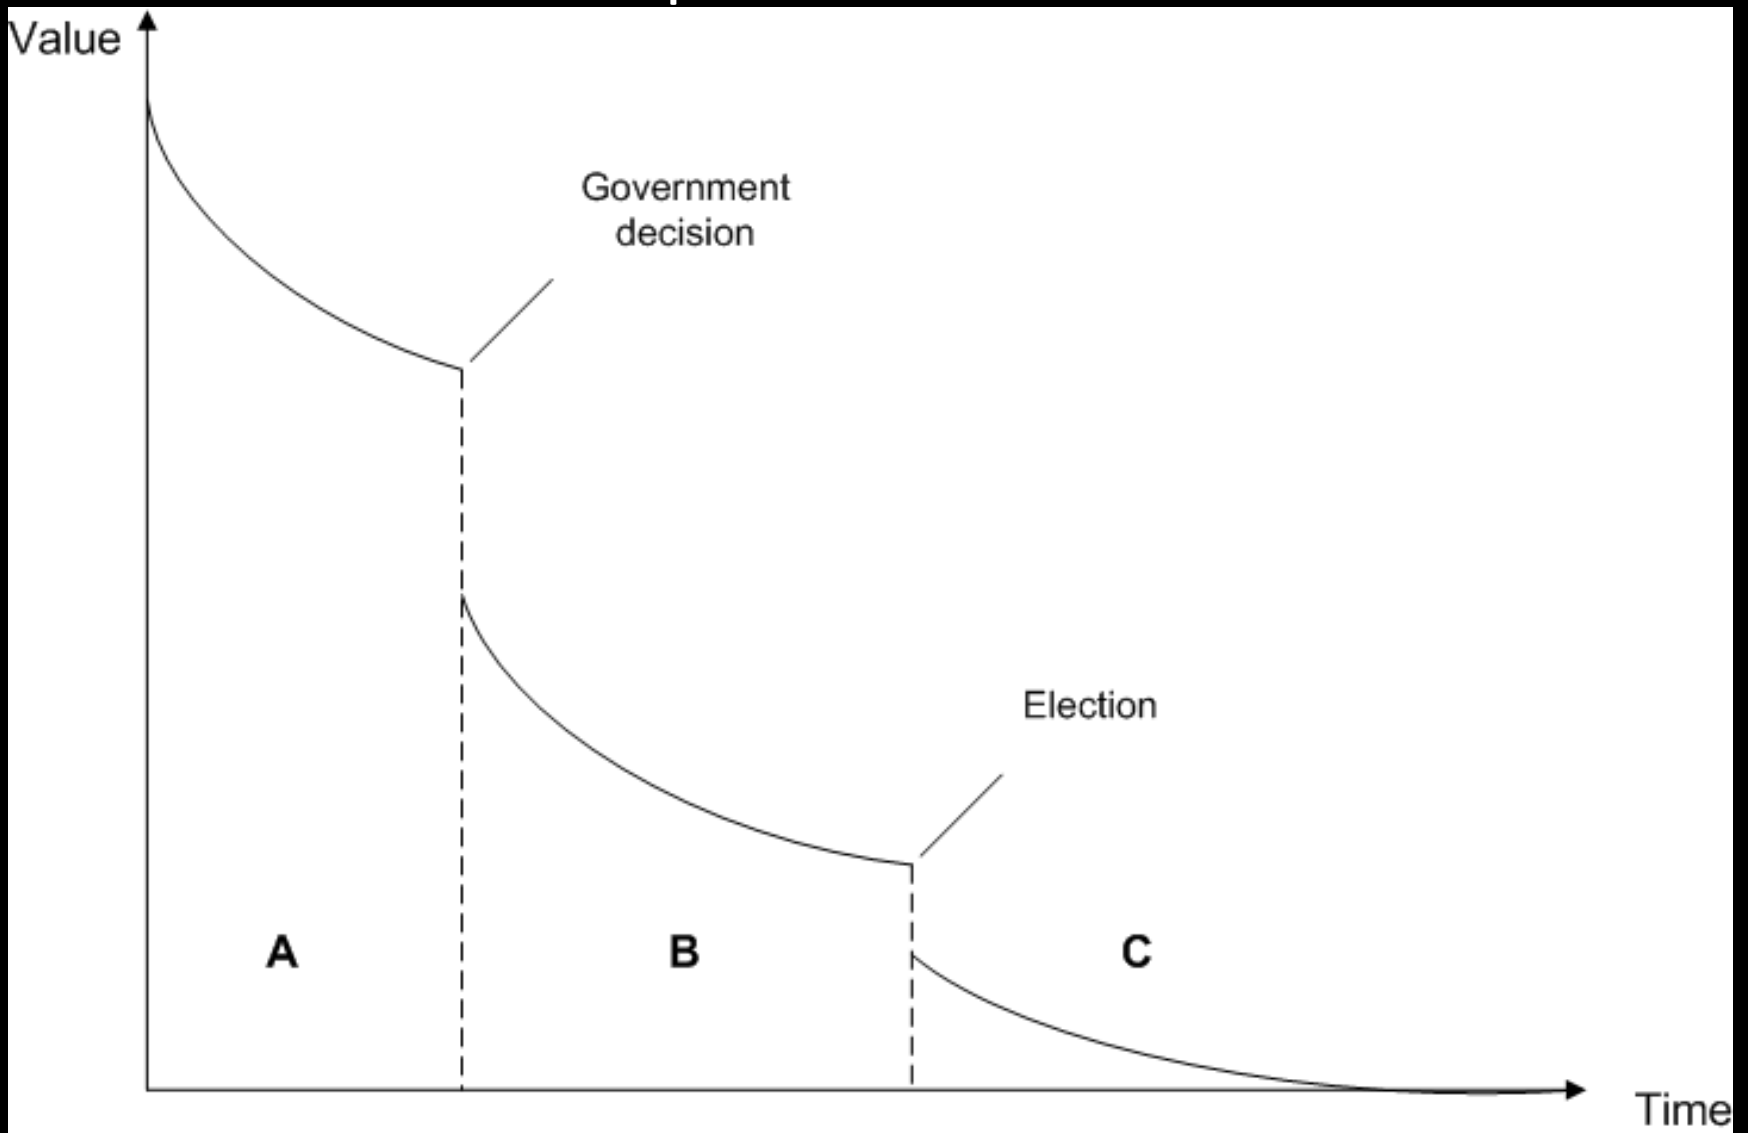

$$A = \frac{b - \left(\frac{p}{in} \right)}{(b - p)}$$

Info marginal cost + utility

Information's value decreasing over time and political moments

d. Research questions and metho.

- Q0: Role of governmental information
 - Crafting of a theoretical framework (more a reflexion than a classic method)
- Q1: The characteristics of Qc's FOIA
 - Normative analysis of the law itself, identification and qualification of the incentives mechanisms using the theoretical framework

d. Research questions and metho.

- Q2: The characteristics of the implementation behavior of Qc's FOIA
 - Interviews with IOs
 - Analysis of internal policies
 - Analysis of lists of classification*
 - Generic document requests
 - Analysis of automatic disclosure websites
 - Analysis of annual management reports

*Data was mainly collected in departments rather than in all kind of public bodies

Some thoughts about

Evaluative considerations

1. What kind of program ?

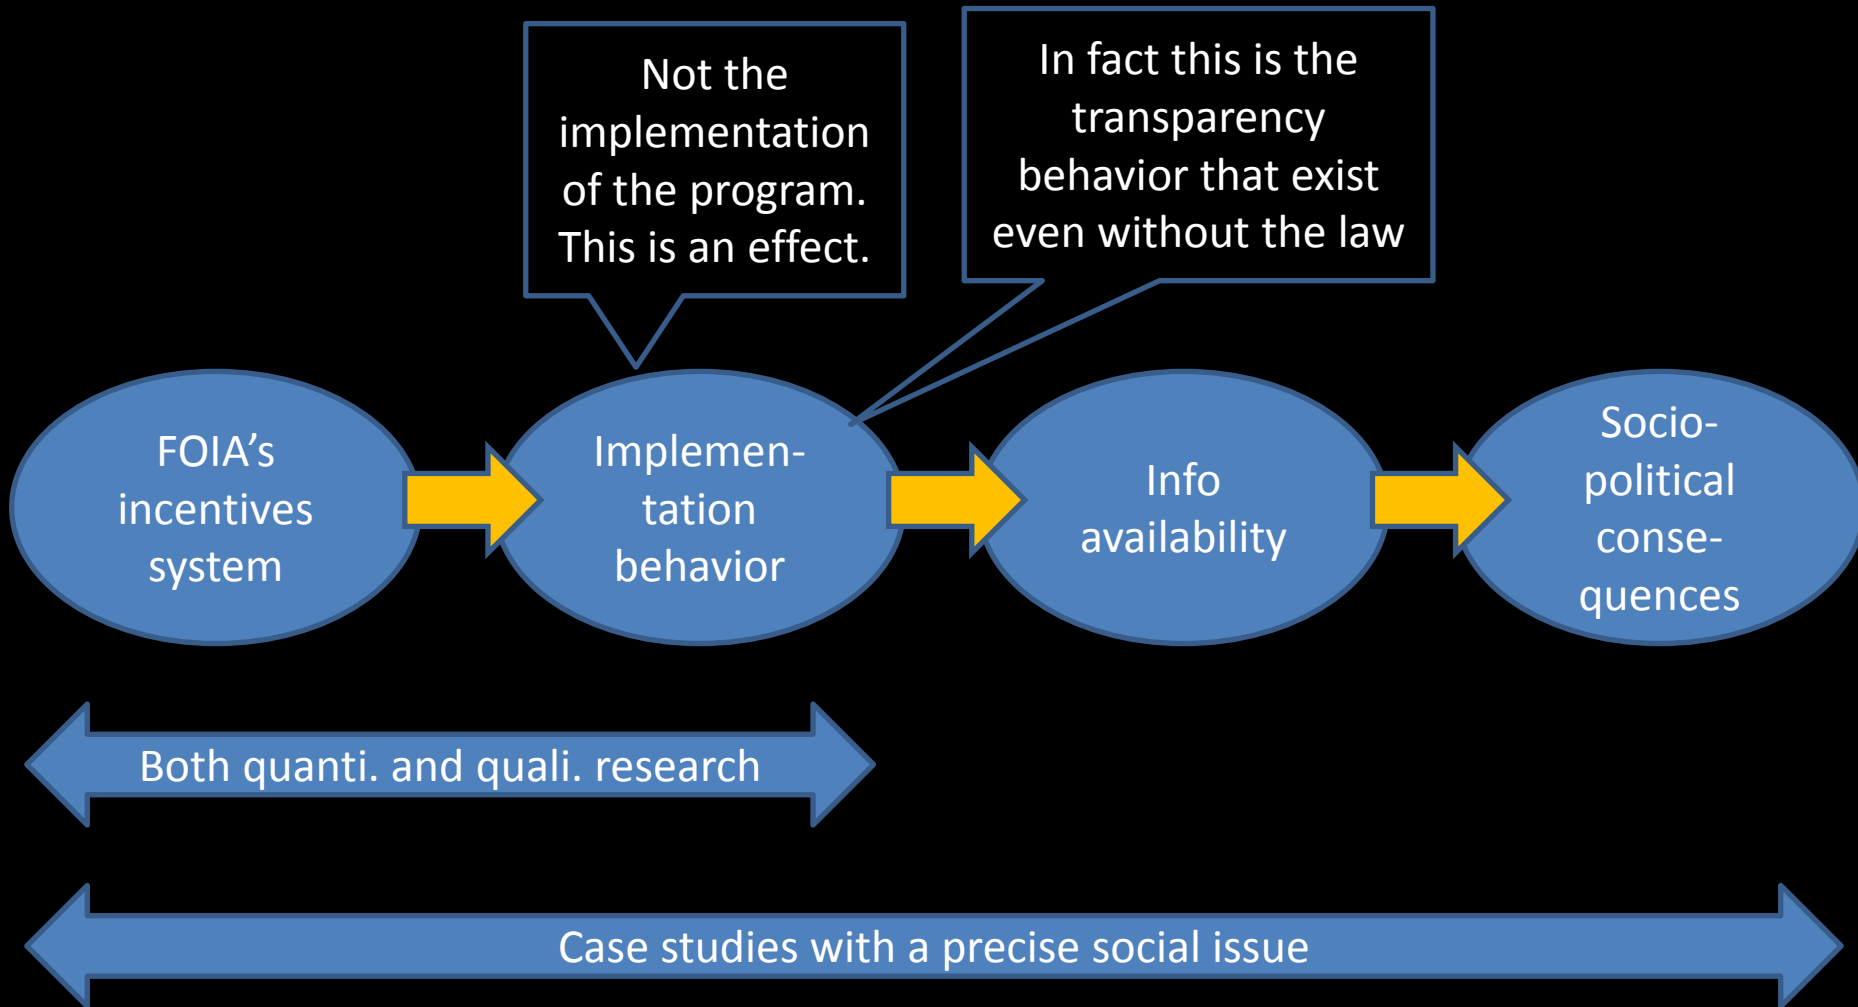

- Is a law a program ?
- Is program evaluation includes law evaluation?
- What is the causal starting point ? Should'nt we look at administrative efforts instead ?

1. What kind of program ?

- FOIAs are efforts to change administrative behavior regarding access to public records and transparency in general
 - (at least that's their political legitimacy)
- They are regulations backed with an enforcement system (surveillance and appeal) aiming at a target population made of somehow reluctant public bodies.

2. Basic causal pathway

3. Data collection challenges in interviews

- Confidentiality and its limitations for analysis capacity
 - Crossing datas from interviews with institutional variables
- Research on transparency in a non-transparent world
 - Caution, reluctance
- Rely on very factual elements that act as proxies.

3. Data collection challenges about FOIA compliance

- Can't ask people if they are transparent or not, or to collect data on their own violation of a law.
 - Well, you can ask, actually. But that is the best you can do about it.
- Absence of something tells something else
 - Penalties from FOAI have never been applied
 - IO have no way to monitor or prevent violations

3. Data collection challenges regarding decisions on info requests

- Non-existent data banks
- A beginning of official data
- Impossibility to compare between public bodies
 - data gathering and presentation
- Weaknesses in terms of conceptual validity
 - % of dissemination vs % retention
 - % of voluntary dissemination ?

3. Data collection challenges

- Is strict compliance what we want to measure transparency ?
- In today's administrative culture the "compliance layer" is mostly ok, at least in major departments.
- Try to catch the discretionary layer

Future research considerations

- This presentation was about an evaluative regard on Qc's FOIA
- But what can the theoretical framework tell us, this time, about evaluation ?
 - The nature of evaluation as a informational good in the political market
 - The strategic rational behavior regarding production and dissemination of evaluation
