COVID: What Happens If You Test On- or Off-campus?
Watch for symptoms:
People with COVID-19 have had a wide range of symptoms reported – ranging from mild symptoms to severe illness. Symptoms may appear 2-14 days after exposure to the virus. People with these symptoms may have COVID-19:
- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea
This list does not include all possible symptoms. CDC will continue to update this list as we learn more about COVID-19.

Student Tests Positive at Sindecuse

IF POSITIVE

“yes” on survey question or symptomatic

Asymptomatic or unexposed testing

TELEHEALTH APPT.

After Hours Care

Sometimes students become ill during times that the Health Center is not open.

- People with COVID-19 have had a wide range of symptoms reported – ranging from mild symptoms to severe illness.
- Symptoms may appear 2-14 days after exposure to the virus.
- People with these symptoms may have COVID-19:
  - Fever or chills
  - Cough
  - Shortness of breath or difficulty breathing
  - Fatigue
  - Muscle or body aches
  - Headache
  - New loss of taste or smell
  - Sore throat
  - Congestion or runny nose
  - Nausea or vomiting
  - Diarrhea
- If you have any of these symptoms and they are new to you then make an appointment with Sindecuse to discuss these symptoms and need for testing.
- In the meantime wear a mask social distance and avoid contact with others.

If you need immediate attention when Sindecuse is closed, contact a local urgent care center or emergency room. A web search for “urgent care Kalamazoo” will turn up results with a map to help you locate the closest facility.

Be aware that many providers outside of the health center may conduct a PCR COVID test that could take days to provide a result.
When to Seek Emergency Care

Look for emergency warning signs* for COVID-19. If someone is showing any of these signs, seek emergency medical care immediately:

• Trouble breathing
• Persistent pain or pressure in the chest
• New confusion
• Inability to wake or stay awake
• Bluish lips or face

*This list is not all possible symptoms. *

Call 911 or call ahead to your local emergency facility: Notify the operator that you are seeking care for someone who has or may have COVID-19.
